My inspection experience

Does your authority mandate the use of process safety performance indicators for your Seveso establishments? In Denmark the authorities have no mandate to require the use of SPI - but like in the directive - SPI is mentioned in the Danish guidelines

If not, do you know if any of your sites have Safety Performance Indicators (SPI)?
It is not known for sure how many sites are using SPI - and after reading the recommended guidelines as HSE guidebook and OECD guidance, I cannot point out Danish sites using SPI as described

If so, in your estimation, how many (approx%) use some kind of SPI (even if in your opinion some may not be complete or of good quality)?
It will therefore be a low percentage

Do you consider SPIs in the inspection if they have them? If yes, how do you consider them, e.g., for dialogue, as evidence (evidence of what?), etc.
And I/we have therefore no particular focus on SPI during inspection

But with my participation at this workshop, I hope to gain more insight into the SPI and the benefits of a more structured risk assessment. I have therefore looked forward to this MJV, in hope for greater insight and exchange of experience and good practices.
What sites should use SPIs?

Do you think SPIs are useful for sites? Are they useful for the Seveso inspection?

Why or why not?

In your opinion are there sites which are not currently using SPIs which could benefit from their use?

Good and bad practices

From your observations on sites using SPIs:

Give an example of a good practice

Give an example of a bad practice
