

- Fundamentals of safe operation must be in place before you start SPIs
- If they dont have SPIs, you educate first then move to SPIs over time if appropriate
- Linking SPIs with major scenarios
- How good is your safety mgmt, how do you know, show me
- Sites who have SPIs for a time .. Check if they chg over time

- Balance btwn lagging and leading indicators
- Sites have to live a little bit with the same SPIs to understand better how it works and what doesnt work

Countries just starting with SPIs

- Start with awareness raising
- Still always up to operator

- Explore how much the companies understand their SPIs
 - Do they know what is safety critical equipment
 - Where do the SPIs come from
 - What do they measure
 - How do they fit with other KPIs
 - Are they collecting information, do they have SPIs dont know it

- Indicators can already be available from other aspects of the operation, occupational hygiene, environmental monitoring, trade association metrics, etc.
- Why choose SPIs? What are they? Whos responsible? How do they choose?
- Inspector should not focus on numbers but on the robustness of SPI system, selection, etc.
- Things we can do after
 - How can we get industry perspective
 - TWG 2 can create survey for country use
 - OECD project? Must be raised by a member country

- Encourage trade associations for other sectors or at national level to make guidance
- National guidance
 - NL, HU, FI, IT (associated with SMS guidance), UK
 - HSE has SPIs (how to demonstrate monitoring) for all inspection guidance and published online
 - Hazard rating systems of countries can have some interesting indicators, e.g., BE, FI
 - Get NL tank association link?
 - Oil and gas producers OGPA guidance?
