

# Use of SPI in Slovenia

# Use of SPI

- Our authority doesn't mandate the use of process safety performance indicators for Seveso establishments.
- In 2017 Association of Chemical Industry which working within the Chamber of Commerce and Industry of Slovenia, begin with a project using SPI in chemical industry
- Membership in the project is voluntarily
- In the project participate 10 Seveso companies which represent about 30 % of all Seveso sites.
- Currenty we don't look at SPIs in the Seveso inspection (yet).

# What sites should use SPIs?

Do you think SPIs are useful for sites? Are they useful for the Seveso inspection?

*Any tool which helps to prevent an accident is useful*

In your opinion are there sites which are not currently using SPIs which could benefit from their use?
