The Zema database- a tool for inspectors?

Outline

1 OVERVIEW: INFOSIS

2 THE ZEMA DATA BASE

2.1 How does the German reporting system work?

2.2 How can inspectors use it and contribute?

3 THE DATA BASE AS ER

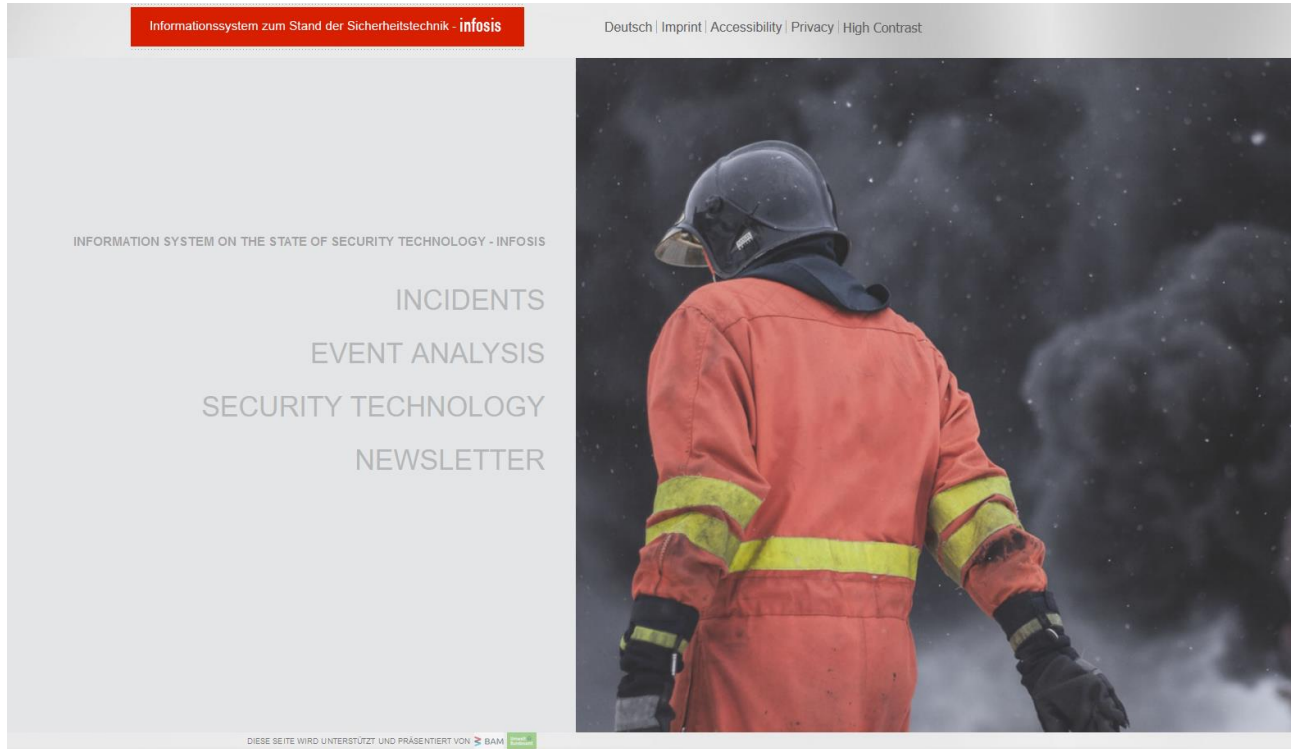

3.1 Where does the database come from?

3.2 How can inspectors use it and contribute?

4 „ONE PAGER“: A NEW TYPE LESSONS LEARNING?

4.1 How can inspectors use it and contribute?

Overview: INFOSIS

- ✓ INFOSIS is an online tool for lessons learning.
- ✓ Information on Seveso and non-Seveso incidents can be found.
- ✓ Overview on security technology
- ✓ And a newsletter!

<https://www.infosis.uba.de/index.php/en/index.html>

The ZEMA Data Base

The screenshot displays the ZEMA database website. The main navigation bar includes 'Dosis', 'ZEMA', 'RS-ER', and 'AIM'. The 'ZEMA' section is active, showing 'Major Accidents and Incidents'. A search bar is present with a 'SUCHEN' button. Below the search bar, there are filters for 'Datum', 'Ort', 'Anlagenart', 'Einstufung', 'Ursache', and 'Anzeige'. The search results section shows '942 ZEMA-Ereignisse gefunden' and a table of results.

Ereignis	Datum
<input type="checkbox"/> 2022-12-28 Brand und Stofffreisetzung an einem Polyethylen (PE)-Behälter in einer chemisch-physikalischen Behandlungsanlage (CPD)	28.12.2022
<input type="checkbox"/> 2022-12-20 Chlorgasfreisetzung an einer Abwasserbehandlungsanlage einer Galvanik	20.12.2022
<input type="checkbox"/> 2022-12-17 Freisetzung von Rohöl an einer Rohöldestillation	17.12.2022
<input type="checkbox"/> 2022-12-01 Stofffreisetzung an einem Reaktionskessel zur Herstellung von Ketobester	01.12.2022
<input type="checkbox"/> 2022-10-27 Explosion und Brand von Wasserstoff an einer Wasserstoffversorgung in einem Chemieunternehmen	27.10.2022
<input type="checkbox"/> 2022-10-20 Freisetzung von Salpetersäure (HNO ₃) in einer Galvanikanlage	20.10.2022
<input type="checkbox"/> 2022-08-25 Brand in einer Müllverwertungsanlage	25.08.2022
<input type="checkbox"/> 2022-08-25 Freisetzung von Ammoniak an einer Kälteanlage (Friswassererfrischung) bei	25.08.2022

- ✓ The “Zentrale Melde- und Auswertestelle für Störfälle und Störungen in verfahrenstechnischen Anlagen”
- ✓ Central Reporting and Evaluation Office for Major Accidents and Incidents in Process Engineering Facilities
- ✓ records and evaluates events which must be reported to the authorities pursuant to the German Major Accidents Ordinance and the EU-Seveso-III-Directive
- ✓ documents them in a database
- ✓ and publishes all events in annual reports

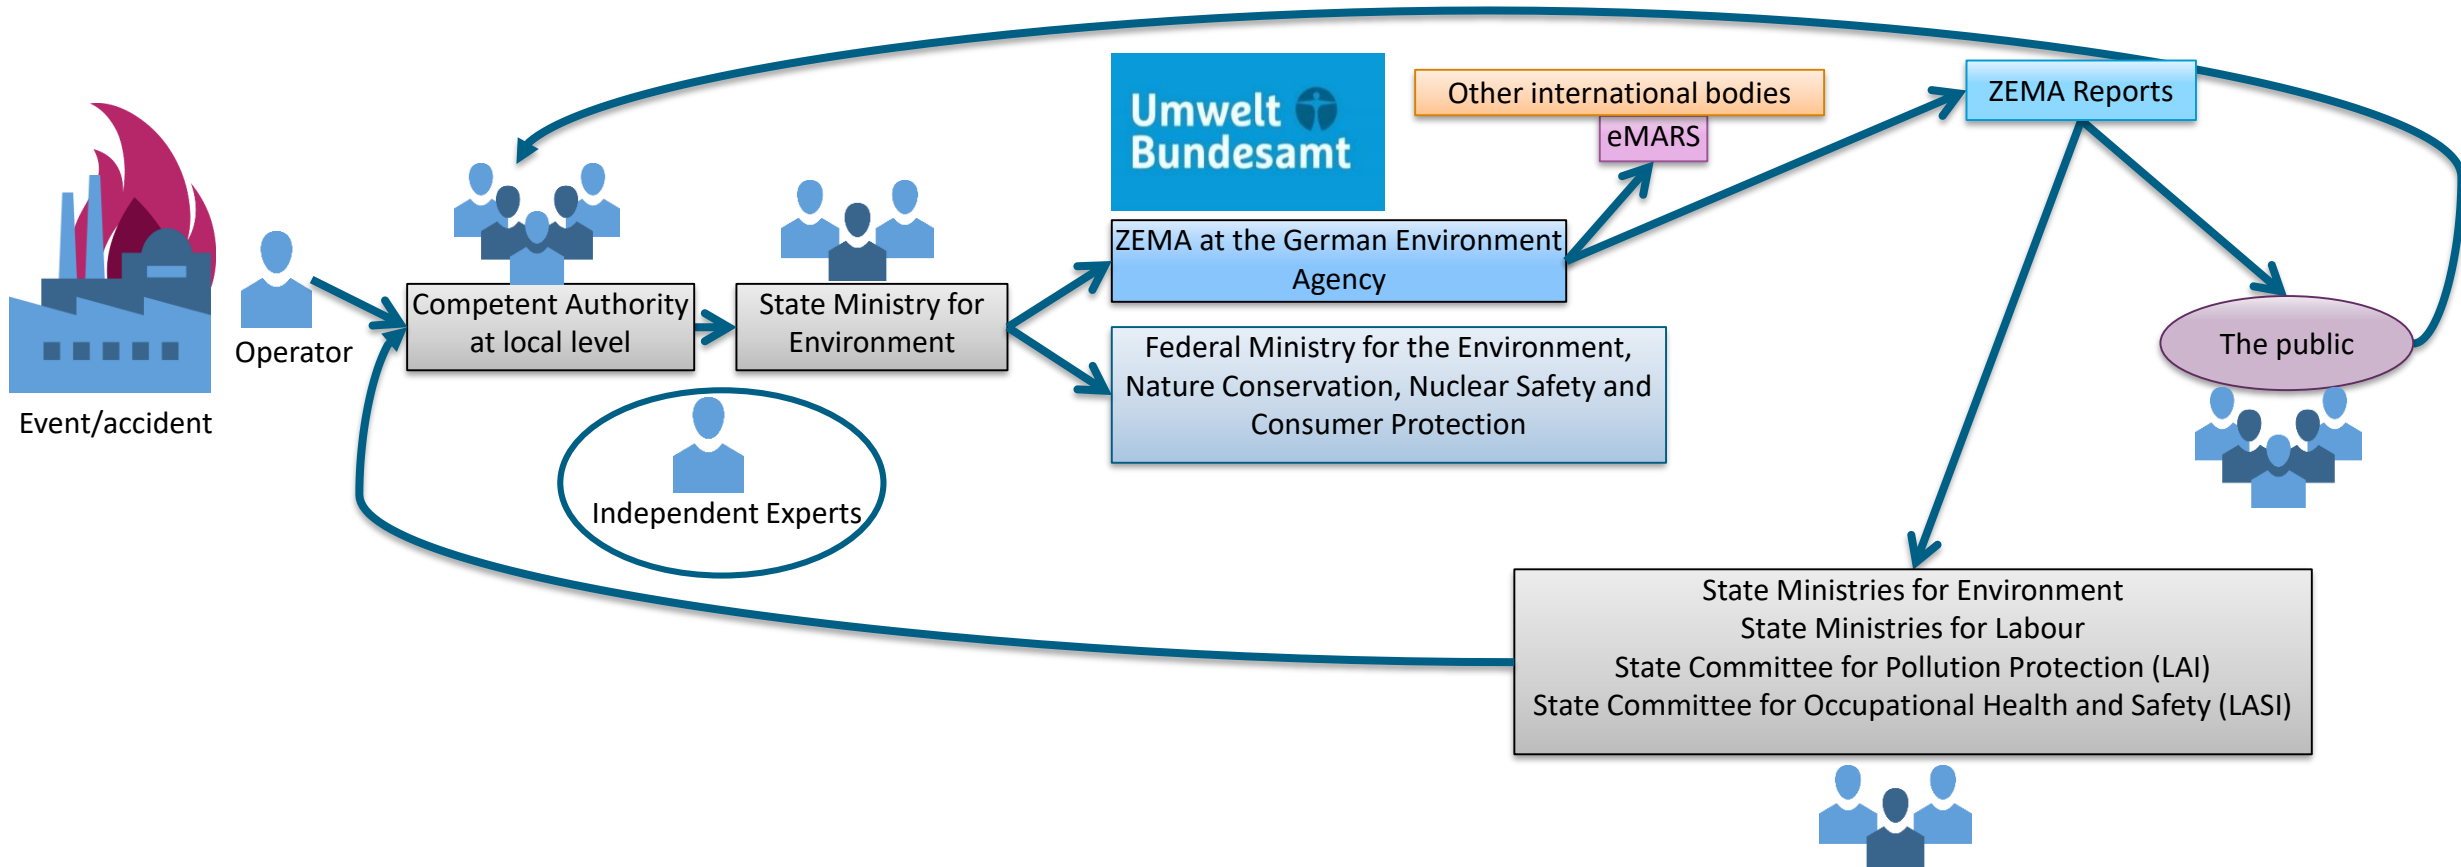

<https://www.infosis.uba.de/index.php/en/site/13947/zema/index.html>

What is reported in ZEMA?

- ✓ Seveso-III- Directive is primarily implemented in German law with the Major Accidents Ordinance (MAO, German Störfallverordnung (12. BImSchV))
- ✓ The Criteria for Notification of ZEMA is listed in Appendix IV, MAO:
- ✓ There are three categories (classes of accidents that are reported):
 - I. Events with minimum quantities of hazardous substances or certain consequences:
 1. Substances involved
 2. Injury to persons and damage to real estate
 3. Immediate damage to the environment
 4. Damage to property
 5. Cross-border damage
 - II. Disturbances of normal operation which are of particular technical interest for preventing major accidents or limiting their consequences
 - III. Disturbances of normal operation where substances listed in Annex I are released or enter into undesirable reactions and where damage results or hazards to the public or the neighbourhood cannot be clearly excluded

How does the German reporting system work?

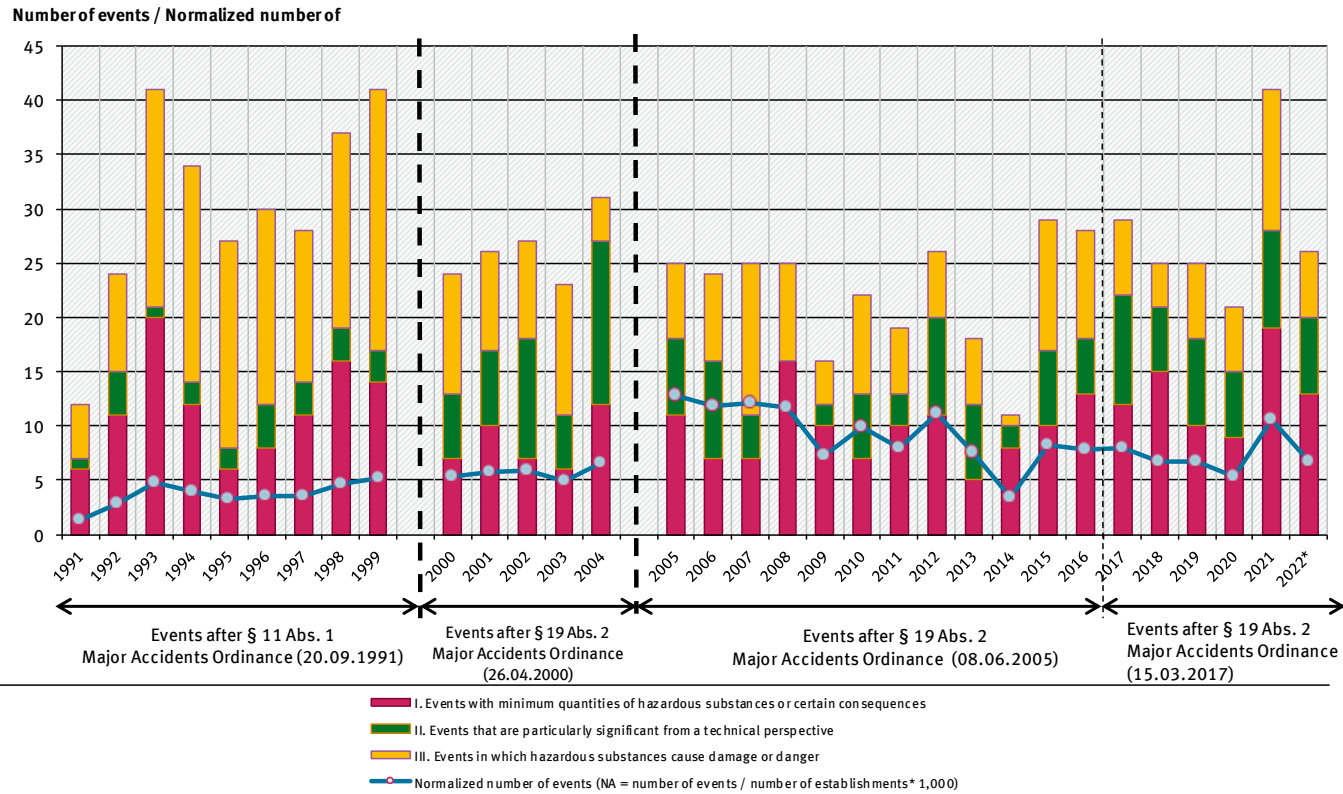

A ZEMA report contains (in concordance with Article 16 Seveso-III-Directive):

- ✓ Information on the category of the event
- ✓ Information on the plant type and the concert plant part which was involved
- ✓ Time and Data of the event and the operating procedure which lead to the event
- ✓ Data of the hazardous chemicals involved
- ✓ Impacts in the establishment / Impacts outside the establishment:
 - Deaths/ Injures
 - Economical Loss
 - Environmental Damage
- ✓ Description of the event and the emergency measures
- ✓ **Lessons Learned**

Incidents in Germany in the last thirty years

Number of events after the Major Accidents Ordinance from 1991 to 2022

* preliminary data

Quelle: German Environment Agency, Zentrale Melde- und Auswertestelle für Störfälle (ZEMA)

Operating procedure which lead to the incident

Reported events in 2020 and on average over the last 28 years

Quelle: German Environment Agency, Zentrale Melde- und Auswertestelle für

How can inspectors use it and contribute?

German Inspectors:

- ✓ *Investigate an event with the help of the independent expert thoroughly*
- ✓ *Inform other colleagues in your Land or in other Länder about events that happened in your jurisdiction and the lessons learned*

All Inspectors:

- ✓ Get the ZEMA- newsletter, unfortunately its in German

<https://www.infosis.uba.de/index.php/en/site/13954/aim/index.html>

- ✓ Check out eMARS

<https://emars.jrc.ec.europa.eu/en/emars/accident/search>

- ✓ Talk with your operators about lessons learned form events in similar establishments

The Data Base AS ER

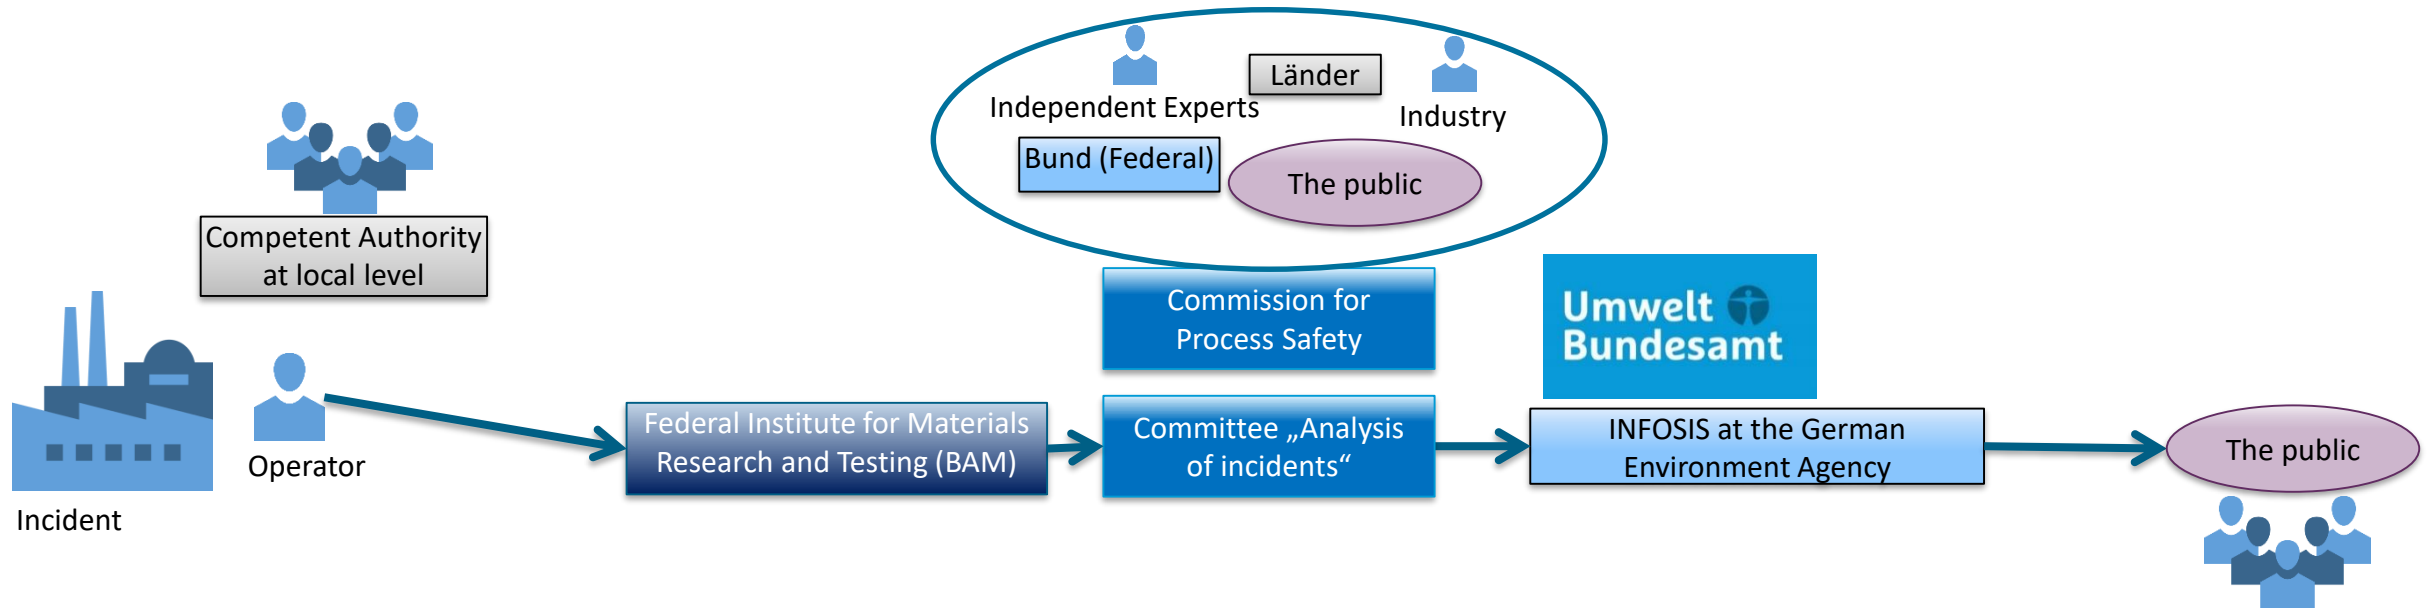

- ✓ Non-notifiable incidents are collected voluntarily
- ✓ Usually operational malfunctions which do not lead to a reportable incidents after the German Major Accident Ordinance
- ✓ Reports are anonymised and generated in the same scheme as a ZEMA report by the Committee „Analysis of incidents” (AS-ER) of the Commission for Process Safety (Kommission für Anlagensicherheit)
- ✓ The purpose is to understand operational malfunctions which could lead to major accidents and learn from that

<https://www.infosis.uba.de/index.php/en/site/13948/aser/index.html>

01.03.2023 TWG 2: The Role of Authorities in Promoting Lessons Learned - Webinar

10

Where does the database come from?

How can inspectors use it and contribute?

German Inspectors:

- ✓ *Encourage Operators to report non-notifiable incidents to the Federal Institute for Materials Research and Testing (BAM)*
- ✓ *Contribute to the KAS (Commission for Process Safety) group*

All Inspectors:

- ✓ Read the reports (German only)

„One Pager“: A new type lessons learning?

- ✓ The „lessons-learning“ subcommittee of the State Committee for Pollution Protection (LAI) will
 - ✓ Take ZEMA accidents that are significant:
 - because of their impact,
 - if the happened more then once,
 - if it is in a significant plant type
 - ✓ It is boiled down to one page and simplified lessons are extracted, conclusions can be directly applied in industry or in inspections
 - ✓ It is released to the public and the Länder
 - ✓ Starts this year

The Zema database- a tool for inspectors?

How can inspectors use it and contribute?

German Inspectors:

- ✓ *Maybe recommend an incident*

All Inspectors:

- ✓ Read the „One Pager“ (in German)
- ✓ Apply the conclusions to inspections and permissions

The ZEMA database- a tool for inspectors?

- ✓ The German database could be a tool for inspectors to look up similar incidents or incidents that occurred in similar plant types → you can also use eMars to get the English incident reports
- ✓ The newsletter is a possibility to stay informed about current incidents
- ✓ The new „One Pager“ on lessons learned should boil down information and make it even more accessible

Thank you for your attention!
